

# **GSH-Plus™** from Biotics Research

## Glutathione + Other Amino Acids for Major Antioxidant Protection

---

### **Description – Amino Acids for Multiple Metabolic Functions & Detoxification**

Providing even greater antioxidant protection than that afforded by BioProtect™ also from Biotics Research, **GSH-Plus™** enhances the function of other substances by, for example, recycling vitamins C and E, activating enzymes for DNA repair, and facilitating absorption of minerals. Additionally, this amino acid formulation comprised of glutathione, N-Acetyl-Cysteine (NAC), and glycine can counteract potentially toxic substances such as pharmaceuticals (aspirin and NSAID-induced gastric ulcers), recreational drugs (alcohol and tobacco), and toxic heavy metals (arsenic, aluminum, cadmium, lead, and mercury).

### **Health Benefits – Multiple Systems Antioxidant Support**

**GSH-Plus™** and its glutathione backbone support virtually every physiological system:

- Life Extension – Inhibits progression of the aging process at the cellular level
- Cardiovascular – Reduces the risk of atherosclerosis or arterial plaque formation
- Cells – Adequate levels prevent cellular death and mitochondria oxidation
- Digestion – Low levels lead to Crohn's, gastric ulcers, and pancreatitis
- Ears/Hearing – Helps with the prevention of noise-induced hearing loss
- Excretory – Kidney concentration may protect against diabetic nephropathy
- Eyes/Vision – Optimal levels may help with cataracts, glaucoma, and eye surgery
- Hair – Antioxidant effect may protect hair follicles as in male pattern baldness
- Immune – May help prevent/treat AIDS, influenza, hepatitis C, liver cancer
- Metabolism – Scavenges free radicals in chronic fatigue syndrome (CFS), diabetic neuropathy, and cirrhosis of the liver (highest tissue concentration of GSH)
- Nervous – Deficiency linked to serious disease: Alzheimer's, Lou Gehrig's (ALS), autism, manic depression, diabetic neuropathy, Parkinson's, and schizophrenia
- Respiratory – Low levels found in many common conditions: asthma, Chronic Obstructive Pulmonary Disease (COPD), cystic fibrosis, emphysema, and rhinitis
- Sexual – May be helpful in the treatment of male infertility

### **Enhancement of Glutathione Function**

Many substances, foods and beverages may enhance endogenous glutathione function including: glutamine, melatonin, DHEA, germanium, magnesium, selenium, sulfur, zinc, curcumin, quercetin, lipoic acid, vitamins B, C & E, red wine, garlic and globe artichoke.

### **Application – Clinical Dosing**

1 capsule three times daily with meals or as directed by your healthcare professional
